Annex20

Annex 1: SE AG EHS Policy20

1. Purpose and Introduction

Environmental protection, the health and safety of our employees, our business partners and other stakeholders is an integral component of our corporate responsibility and is applicable, in all Siemens Energy Business Areas, Corporate and Global Functions (inc. Project Entity) Regional Hubs and Affiliated Companies, in all countries in which we operate.

Maintaining high environmental standards, promoting the health of our employees, and ensuring a safe working environment for our employees and others are prerequisites for sustainable business success and are important company goals.

Elimination of hazards and the prevention of incidents and damaging events enhances our competitive position by maintaining and strengthening the performance of our employees, our business, and the protection of our assets.

Management system standards ISO14001 and 45001 or equivalent standards in Siemens Energy countries, provide a framework for the development and implementation of specific policies, objectives, targets, and processes that support the integration of EHS within strategic and business decision making processes.

Adherence with these management standards aids the company to:

- Determine its EHS governance obligations.
- Identify relevant internal / external interested parties and stakeholders.
- Comply with legal and other obligations.
- Identify assess and manage hazards and risks.

The Siemens Energy AG EHS policy is attached to this Standard as Annex 1:

[Siemens Energy AG EHS Policy](#)

2. Leadership and Management Responsibilities

2.1. Executive Board (n-Level)

The Executive Board of Siemens Energy has the responsibility to support the Corporate EHS policy, monitor the level of implementation across the business and review environmental, health and safety performance.

These responsibilities are demonstrated by:

- Strong leadership and ownership through visible and active commitments.
- Establishment of effective downward/upward EHS communications & management structures.
- Integration of EHS within strategic and business decisions.
- Engagement with the workforce to promote safe and healthy working conditions.
- Provision of high quality EHS training and competency development.
- Identification and assessment of EHS risks and opportunities.
- Monitoring, reporting and review of EHS performance.

2.2. Siemens Energy – EQS

The Executive Board member assigned with the responsibility for EHS is supported by the Vice President EQS (*Global Process Owner*) in this role. The appointed Vice President EQS supports EHS governance requirements company wide and the Executive Board in the fulfilment of its EHS duties.

This includes the following tasks and authorities:

- EHS Governance on behalf of the Executive Board and the appointed board member for EHS.
- Primary contact for EHS with the Executive Board Member responsible for EHS
- Maintaining and developing the Zero Harm Framework.
- Monitoring of EHS legal compliance and performance.
- Support and advice related to the integration of EHS within strategic & business decision making.
- Governance of the country core.
- EHS training and competency frameworks related to standards and instructions.
- EHS Risk Management at the corporate level.
- Communication on EHS topics.
- Support and advice related to industrial and product related environmental protection.
- Contributes to company annual reporting.
- Chair of the SE EQS virtual team.

2.3. Siemens Energy - Senior Management (Level n-1)

Overall responsibility for:

- Ensuring that suitable EHS management systems are implemented in each Business Area, Corporate or Global Function or Affiliated Company for which they are responsible and confirming that environmental, health and safety management systems are effective and all EHS related duties, responsibilities and tasks are completed.
- Implementing the SE EHS Policy, ensuring that EHS is adequately resourced to meet operational needs and alignment with the Zero Harm Framework.
- Compliance with country, local regulatory and legal frameworks, demonstrating leadership and ownership of EHS, monitoring EHS performance, engagement, consultation, participation, and communication with the workforce on matters of EHS.
- Ensuring that all necessary measures are coordinated for the implementation of industrial and product related environmental protection requirements. This includes the identification of environmental aspects and eco-design of product.
- Organize and delegate EHS roles, responsibilities, and authorities to competent people to support business and operational needs, the EHS Management system, legal and other requirements.

- Appoint EHS, Occupational Health, Industrial / Product Related Environmental Protection resources where required, to support legal and regulatory requirements, the business, its work activities and ensuring unrestricted access to relevant line managers.

2.4. Siemens Energy – Management (Level n-2)

Responsible and accountable for EHS ensuring:

- The development, implementation, review, alignment, and management of relevant EHS processes, procedures, standards, and work instructions that are required to effectively manage work activities. This includes ensuring the identification and implementation of all EHS related duties and tasks.
- All EHS processes, procedures and work instructions meet local and/or country and/or regulatory and legal frameworks (inc. ISO 45001 and 14001 management system standards).
- Implementing the SE EHS Policy, ensuring that EHS is adequately resourced to meet operational needs and alignment with the Zero Harm Framework.
- Incident reporting, investigation, and root cause analysis.
- Compliance with country and local regulatory and legal frameworks, demonstrating leadership and ownership of EHS, monitoring EHS performance, engagement, consultation, participation, and communication with the workforce on matters of EHS.
- Ensuring that all necessary measures are coordinated for the implementation of industrial and product related environmental protection requirements. This includes the identification and evaluation of environmental aspects, impacts, and the eco-design of products.
- Delegate EHS roles, responsibilities, and authorities to competent people to support operational needs, the EHS Management systems, legal and other requirements.
- Appoint EHS, Occupational Health, Industrial / Product Related Environmental Protection resources where required, to support legal and regulatory requirements the business, its work activities and ensuring unrestricted access to relevant line managers.
- Assign industrial and product related environmental protection duties to relevant functions (e.g., Procurement, Logistics, Research and Development etc.).

2.5. Siemens Energy – Global Functions (Inc. Project Entity)

Each Global Function Head and Management Team have the responsibility to support and ensure that the requirements, related to the Environment, Health and Safety are implemented and maintained.

The key responsibilities include:

- Implementation of the SE EHS Policy.
- Implementation of EQS EHS requirements (e.g., standards, instructions etc.).
- Compliance with country and local EHS regulations (inc. ISO 45001 & 14001 requirements).
- Alignment with the Zero Harm Framework.
- Identification of EHS hazards and risks in the workplace.
- Work activity risk assessment.

- Promotion of health and wellbeing.
- Provision of EHS training.
- EHS consultation, participation, and communication.
- Incident reporting, investigation, and root cause analysis.
- Identification and evaluation of Environmental aspects and impacts.
- Protection of the Environment.

2.6. Siemens Energy – Business Area EQS / EHS

Business Area EQS / EHS have the responsibility to support the appointed EVP in all matters related to Environment, Health, and Safety.

The key responsibilities include:

- Reports to the respective EVP as applicable.
- EHS strategy and integration of Environmental aspects.
- EHS target setting and performance monitoring.
- EHS resource, competency management and training.
- Monitoring EHS performance.
- Supporting for the reporting of incidents, investigation, and root cause analysis.
- Compliance with country and local EHS regulations (inc. ISO 45001 & 14001 requirements).
- EHS data for sustainability and environmental reporting.
- Implementation of EQS EHS requirements (e.g., standards, instructions etc.).
- Alignment with the Zero Harm Framework.

2.7. Siemens Energy – Operational Roles

To meet operational, legal and/or regulatory requirements, including but not limited to:

- | | |
|-----------------------------|---|
| • Radiation Protection. | • Product Related Environmental Protection. |
| • Environmental Protection. | • Dangerous Goods. |
| • Laser Protection. | • Fire Safety and Explosion Protection. |

The Business Areas, Global Functions or Affiliated Companies shall appoint qualified and experienced resources to carry out tasks and operational activities, ensuring legal / regulatory compliance.

Reporting lines shall be aligned within the Business Areas, Global Functions or Affiliated Companies in which the appointments were made. The responsibilities and duties for key operational roles are defined within applicable country laws and regulations and, local EHS Management systems, standards, and procedures.

2.8. Regional Hub - EQS / EHS

Where appointed, Regional Hub EQS / EHS supports the HUB EVP providing responses to EHS queries and collaborating with Business Areas, Corporate Functions, Global Functions, EQS and Country EHS Lead on topics related to:

- Resource management and coordination.
- Support for the reporting of incidents, investigation, and root cause analysis.
- Collecting and sharing information on local EHS initiatives.
- Best practice sharing.
- Zero Harm.
- Support for the EHS Audit strategy.

Additional responsibilities can be defined in agreement with HUB SVP and the EQS / EHS Global Process Owner.

HUB EQS / EHS also provides EHS advice and support to Permanent Establishments within the HUB.

This appointment is a formal process and requires the completion of an appointment letter which is to be signed by HUB EVP and EQS / EHS Global Process Owner. This role may also include attendance at EQS virtual team meetings, that considers company EHS Strategy, Implementation and Measurement.

NB: Where a Regional Hub EQS/EHS is not appointed, the HUB EVP / SVP retains the responsibility to ensure the health and safety of its employees and collaboration with the Business Areas, Corporate and Global Functions, EQS and Country EHS Lead.

2.9. Country EHS Lead

The appointment of the Country EHS Lead is dependent on the size of the country. The role has the responsibility to provide governance support to the Country MD, Business Areas, Corporate and Global Functions within the country including Permanent Establishments and Affiliated Companies on the EHS elements identified in the Country Core and the Zero Harm Framework.

Country core includes elements within the following categories:

- Legal structure and compliance with country and local EHS Regulations.
- Health promotion and programs.
- Regulation and compliance.
- Support for the reporting of incidents, investigation, and root cause analysis.
- KPI Reporting.
- Annual reporting.
- EHS Communications.
- Project / Resource Management.

The EQS Global Process Owner maintains a register of detailed country core elements.

The appointment of the Country EHS Lead is a formal process and requires the completion of an appointment letter and signed by the relevant Country MD and the HUB EQS / EHS Lead.

2.10. Employees

All Siemens Energy employees (inc. temporary workers) have a duty to:

- Take care of their own health and safety and the health and safety of others.
- Cooperate and communicate with the employer on EHS matters.
- Be aware of and align with the SE Zero Harm Framework.
- Report EHS hazards and risks in the workplace.
- Contribute to and implement work activity risk assessments.
- Report EHS incidents and near misses.
- Comply with local EHS laws and regulations.
- Work in line with SE / local EHS requirements (e.g., standards, instructions etc.).
- Protect the Environment (e.g., Recycling, energy efficiency, water use, pollution control etc.).

3. Siemens Energy EHS Management

Ownership and governance requirements are established to verify that EHS management systems have been developed in line with ISO 45001 and 14001 and effective processes and procedures have been documented and issued to meet legal and other requirements.

3.1. EHS Management Systems Structure

All Business Areas are to be covered by an EHS management system including where applicable, associated Corporate and Global Functions (inc. Project Entity) and Affiliated companies. The overall EHS management system structure and the scope and applicability of different local management systems are decided by the Business Areas, Corporate and Global Functions.

The management system approach places full responsibility, ownership, and accountability directly within the Business Areas, Corporate and Global Functions. The main objective is to ensure focus on specific environment, health and safety risks and mitigation.

In Siemens Energy and in line with the ISO management standard, key elements must be integrated within the management systems to support governance expectations for:

3.1.1 Safety

EHS management systems must include, but not limited to:

- Integration of the Zero Harm Framework.
- Embodiment of hazard identification and risk assessment into working practice.
- Compliance with legal obligations.
- Identification and evaluation of EHS risks and opportunities.
- Incident management including investigation and root cause analysis.
- Emergency preparedness.

3.1.2 Health Management

Identification and implementation of health management programs that focus on healthy working and healthy employees, reflecting local needs and conditions including, but not limited to:

- Identification and evaluation of health-related aspects.
- Employee fitness for work.
- Awareness of health and mental health.
- Pandemic preparedness and planning.

3.1.3 Environmental Protection

Environmental protection is an overall business responsibility, a social commitment, and a success factor. We meet our environmental protection obligations worldwide by means of innovative production processes, product solutions and a sophisticated environmental management and reporting system.

The success of environmental protection depends to a large extent on managers and employee's awareness of relevant environmental aspects and encouragement of our employees to take ownership and responsibility for preserving and improving the environment.

Industrial and Product Related Environmental Protection

Consistent and innovative environmental protection management is an integral part of our business processes, goes beyond legal requirements and plays a major role in the sustainable development of our company.

When determining the scope of the environmental, product related and energy management system. Operational activities, services, solutions and products and the expectations of the relevant external parties shall be identified. Procedures for determining legal, operational requirements, environmental aspects for industrial and product related environmental protection are to be established. For example:

Industrial Environmental Protection

- Energy Management and energy efficiency
- Climate protection and efficient use of resources
- Emissions and atmospheric pollutants
- Waste Management
- Pollution Control
- Soil, water protection, wastewater, and water resources
- Biodiversity and nature conservation.

Product Related Environmental Protection

- Product Eco design, lifecycle analysis, materials, substances
- Lifecycle of the value chain (e.g., Production, use, end of life)
- Product environmental aspects and use of resources

- Determination and evaluation of product life cycle environmental aspects (i.e., planning, development, sales, service, use, dismantling, recycling, recovery, and disposal)
- Continually improving and optimizing the environmentally relevant properties of individual products in design, development, procurement and manufacturing phases, the facilities in which they are produced, projects and operational workflows.
- Paying close attention to the environmental impact of our products not only in the production phase but also in planning, design, sales, usage, service, and disposal
- Legal obligations, voluntary commitments, and internal requirements
- List of declarable substances - Control, manage and substitute as required.
- Environmental Product Declarations – Assessment and Evaluation.

3.2. EHS Objectives and Targets

Each Business Area, Corporate and Global Function are required to identify, implement, monitor, and evaluate appropriate EHS objectives and targets to demonstrate improvement, performance, and compliance obligations. This includes any EQS objectives and targets.

Objectives and targets shall be reviewed on a regular basis by the respective management teams and EHS representatives at each level of the organization as well as on global EQS level. Progress is tracked as part of performance and reporting processes. Communication of objectives and targets as well as progress shall be made available to the organization and its internal stakeholders.

3.3. Determination and Evaluation of Compliance

Requirements for the “determination and evaluation of compliance” are identified in the ISO 45001 and 14001 standards and is a mandatory part of management system certification, internal and external audit. Common to both standards, the determination of legal and other requirements, compliance obligations and the evaluation of compliance are applicable.

Each Business Area, Corporate and Global Function certified to ISO 45001 and/or 14001 or forming part of an existing management system is required to establish and maintain a process and / or procedure for determining legal, other requirements, compliance obligations and the evaluation of compliance.

Business Areas, Corporate and Global Functions are required to adhere to management system standards, demonstrating compliance as part of locally defined internal audit schedules and/or external audits carried out by, for example, certification bodies, customers etc.

The objective of the audit is to demonstrate that:

- Applicable “compliance obligations” related to its environmental aspects are identified.
- Applicable legal & other requirements (e.g., hazards, OHS risks etc.) are identified.
- Access to up to date “compliance obligations” and legal and other requirements is available.
- Compliance with country and local EHS regulations can be demonstrated.
- New regulation or amendments to existing regulation is reviewed.
- Plans and actions to address legal and other requirements are established.

- Compliance obligations and legal and other requirements are considered when implementing, maintaining, and improving the OHS management system and establishing what needs to be communicated. (e.g., changes, provision of training etc.)

Evaluation of Compliance

Once the Business Areas, Corporate and Global Functions have determined its compliance obligations, legal and other requirements, it must demonstrate that it has process in place for the evaluation of compliance that includes the:

- Frequency and method of compliance evaluation.
- Evaluating compliance, assessing, and taking action to correct any compliance issues.
- Maintaining knowledge and understanding of compliance status to reflect changes.
- Documentary evidence of compliance obligations, legal and other requirements & evaluations.

3.4. Environmental Aspects

Requirements for the determination of Environmental aspects are identified in ISO 14001 This is a key certification and internal audit requirement.

Each Business Area, Corporate and Global Functions forming part of an existing management system is required to determine, within the scope of the management system, relevant environmental aspects related to its work activities, products, services including lifecycle aspects, abnormal and emergency situations, and associated environmental aspects.

This requirement also extends to Corporate Functions through an aspects register that has been established and made available online via BIC. (*SE Instruction 000082: Determination, Evaluation, and communication of EHS Aspects*).

Processes to determine the environmental aspects will consider:

- Determination and criteria used to identify environmental aspects including significant environmental aspects.
- Changes (e.g., Planned / new development, new or modified activities, products, services).
- Documentation and information regarding environmental aspects.
- Communication of significant environmental aspects.
- Frequency and methods of review.
- The identification of risks and opportunities related to significant environmental aspects.
- Aspects and impacts register.

3.5. Life Cycle Assessment

Where applicable, each Business Area shall carry out life cycle assessments to quantify the environmental impacts related to products, projects or services and considering the full life cycle of the product. *Siemens Energy Instruction 000072: Life Cycle Assessment* provides further information and guidance.

3.6. Hazard Identification, Risk Assessment and Reducing Risk

All Business Areas, Corporate and Global Functions shall define within its EHS management system effective procedures, duties, responsibilities and training requirements for Hazard Identification and Risk Assessment and the reduction of risk utilizing the hierarchy of controls (*e.g., Eliminate, Substitute, Engineering Controls, Administrative Control, PPE*)

All work activities shall be assessed for risk and hazards prior to the commencement of an activity. Measures are to be implemented to evaluate, eliminate, prioritize, control, and manage potential hazards and risks in the workplace, reducing any risks to as low as reasonably practicable.

Risk Assessments are to be conducted by the person responsible for the work activities, supported by EHS and involving employees who shall be completing the work activity. The completeness, accuracy and appropriateness of risk assessments are subject to review.

Hazards and Risks that pose a direct threat to the life or serious injury to employees or other persons and, any threat to the environment, health or business assets must be eliminated prior to the commencement or continuation of work activities.

A register is to be established in the Business Areas, Corporate and Global Functions to identify and record its risks and opportunities, to meet the requirements of ISO 45001.

Following an incident or high potential near miss the applicable risk assessment(s) shall be reviewed to determine if controls need to be revised and/or updated to prevent reoccurrence.

3.7. Operational Management of Change

All Business Areas, Corporate and Global Functions shall ensure that relevant EHS requirements are fully integrated and maintained in procedures that are required for the planning, risk, execution, controlling and the monitoring of operational activities.

Processes for the implementation and control of temporary and permanent changes that impact EHS performance (*e.g., changes: new and existing products or services, legal and other requirements, hazards and risk, new technology, workplace locations and conditions, equipment, environmental aspects*) are to be established and maintained.

Processes and documented information are to be made available and are to be maintained to meet the requirements of the ISO 45001 and 14001 management systems.

3.8. Monitoring and Performance Evaluation

Appropriate performance indicators shall be established to monitor and evaluate EHS objectives and target achievements, improvements, and compliance with legal and other requirements. Monitoring of EHS performance shall be integrated into business processes and not as a separate EHS process.

Internal audit schedules in line with the requirements of ISO 14001 and 45001 are to be established by each Business Area, Corporate and Global Function to assess the effectiveness of the management system and its implementation. To support the audit schedule, Internal Auditors with expert knowledge of Environmental Protection, Health and Safety are to be available.

3.9 EHS Reporting and Incident Investigation

EHS reporting is a key requirement across SE. All Business Areas, Corporate and Global Functions are required to report all incidents using the SE EHS Tool and ensuring that EHS performance data is

checked and validated on a regular basis, to meet requirements in the SE Standard “EHS Reporting, (Document No. 000051).

Investigation of EHS events and incidents provides learning and improvement opportunities, root cause identification and the prevention of reoccurrence. All Business Areas, Corporate and Global Functions are required to ensure that a suitable and sufficient investigation of EHS incidents is undertaken.

As part of the investigation, it is important to classify errors, mistakes, violations, inappropriate behaviors, and consequences.

3.10. Management Review

Management review is an evaluation of the suitability, adequacy, and effectiveness of the integrated management system (IMS) (e.g., ISO 14001 and 45001) requirements, to define and implement actions to improve the performance of the IMS in line with the strategic direction of the company.

Management review is a key part of the multisite certification process. Each Business Area, Corporate and Global Function certified to the above management system standard(s) are required to complete the management review within the timescales described in the SE Standard “Management Review” (Document No. 000039) providing suitable management review information.

This will include, for example, information on:

• Actions from previous management review	• Risks and Opportunities
• Interested parties	• Significant EHS Aspects
• Occupational Health	• EHS Performance
• Objectives and targets	• Communications, complaints, satisfaction
• Incident Investigation	• Nonconformity and corrective action
• Internal Audit	• Evaluation of compliance
• Training and competency	• Consultation and participation
• Results and achievements	

Management review information is provided to the Country EHS Lead or Regional Hub Lead who will collate and analyze all information and provide a consolidated view to SE EQS at the corporate level.

This information will then form the basis of the Management Review meeting at the SE company level.

3.11. Risks and Opportunities

EHS related risk and opportunities are determined, evaluated, and recorded making certain that the EHS Management System achieves its intended outcomes, prevents, or reduces undesired effects and develops plans to address risks and opportunities. This includes external conditions that may affect the company and also, to achieve the objective of continuous improvement while enhancing EHS performance.

Risk and Opportunity Reviews shall also form part of the annual management review process, or sooner should any significant risk be identified, major changes occur in the workplace, facilities, processes and in response to a change in regulation or following a significant incident.

When identifying risks and opportunities, the lifecycle of the value chain (production, use, end of life) shall be given due consideration, especially key aspects such as relevant environmental aspects and

use of resources. This lifecycle perspective ensures that the assessment is not just restricted to the site itself. Outsourced processes shall also to be considered.

3.12. EHS Resources and Support

Qualified, trained, and competent EHS staff, managers, supervisors, and operational resources, are available and efficiently utilized. At the EQS level, resources will be engaged to provide support and advice to Business Area, Corporate and Global Functions on EHS reporting, (including tools), and industrial and product related environmental protection topics.

3.13. Training and Competency

All employees shall be suitably trained, experienced, competent, and qualified to carry out the role into which they have been appointed. Each Business Area, Corporate and Global Function shall ensure that all employees are aware of the Zero Harm Principles, Behaviors and Essentials and specific EHS topics applicable to their role. All EHS training needs, awareness, refresher training and individual competency shall be reviewed and discussed on a regular basis.

3.14. Consultation and Participation

ISO 45001 describes the requirement for the consultation and participation of workers at all levels in the organization. Including:

- Providing mechanisms, time, training, and resources.
- Access to clear, understandable, and relevant information.
- Removing or minimizing barriers to participation.
- Need and expectations of interested parties.
- EHS Policy.
- Roles, responsibilities, and authorities.
- Fulfilment of legal requirements - country and local.
- Objectives and planning.
- Controls for outsourcing, procurement, and contractors.

Each Business Area, Corporate and Global Function is required to decide and demonstrate how worker consultation and participation is managed and progressed.

Communication is a two-way process, not only is the environment, health and safety information passed from management to employees / contractors. Information can be relayed to workers through training programs, inductions, safety meetings, safety committees, employee forums, toolbox talks and safety bulletins, etc.

Copies of relevant communication documents, procedures etc., relating to the environment, health and safety are to be freely available to individuals.

Documents, procedures, legal notices, posters etc. are displayed on notice boards and in a prominent position.

Consultation, participation, and feedback regarding for example workplace safety, identifying hazards, and assessing risk, legal compliance, environment awareness, needs and expectations of interested parties, roles and responsibilities, performance monitoring, incident investigation and nonconformity.

3.15. Communication

Each Business Area, Corporate and Global Function is required to implement and maintain processes that are required for both internal and external communications and, determine what is to be communicated, when and who should be included in the communication (e.g., employees, contractors, visitors, customer, other interested parties).

As part of the communication process the following should be considered:

- Diversity aspects.
- The views of external interested parties, where applicable.
- Legal and other requirements.
- Consistent with the information generated in the management system.
- Reliability of the communication.
- Responses to relevant communication, where required.
- Retention of documents as evidence of communication.

3.16. Documented Information

Each Business Area, Corporate and Global Function, certified to ISO14001 and/or 45001 or forming part of an existing management system is required to ensure that any documented information to meet the requirements of these standards and any other documentation that forms part of the management system shall be effectively managed and controlled.

3.17. Internal Audit

Each Business Area, Corporate and Global Function, certified to ISO14001 and/or ISO 45001 or forming part of an existing management system is required to establish and maintain a process and / or procedure for internal audit of the management system and demonstrate that:

- An audit program is established and maintained, including results of previous audits and reporting.
- Auditors are qualified and have the skills and competencies to perform internal audits.
- Each audit is defined and scoped.
- Ensuring results of an audit are reported to relevant managers, workers, workers representative and other interested parties.
- Nonconformities are identified and action taken to improve performance.
- Retain audit documentation to demonstrate implementation.

3.18. Continuous Improvement

Each Business Area, Corporate and Global Function shall ensure that environment, health, and safety topics are integrated in continuous improvement processes. Input to the improvement process include, for example:

- EHS audits and inspections.
- Incident reporting, investigation, and root cause analysis.

- Compliance reporting.
- Zero Harm Framework.
- EHS related engagement, walks and talks.
- Feedback from interested parties and stakeholders.
- Global sharing of best practice and lessons learned.
- EHS Key Performance Indicators

3.19. Emergency Preparedness and Response

All Business Area, Corporate and Global Functions shall establish and maintain processes and procedures to identify potential accident and emergency situations and establish an emergency response plan. The plan shall be suitable for the scope of work including the involvement of stakeholders, global functions or others who be affected by a potential emergency. This includes:

- Emergency response planning / plan.
- Emergency response training.
- Response plan testing.
- Evaluating the performance of the response plan.
- Communicating roles and responsibilities.
- Providing information to stakeholders and others.

Business Areas, Corporate and Global Functions shall establish and maintain records and documented information related to response planning, emergency preparedness processes, testing and evaluation and shall be made available were requested.

3.20. EHS Zebra Sites

Zebra sites are Siemens Energy locations that have more than one Business Area, Corporate or Global Function residing at a location. Each Business Area, Corporate and Global Function at a location may be independently certified to ISO14001 and/or 45001 or form part of an existing management system certification.

Each Business Area, Corporate and Global Function residing at the location is responsible for ensuring compliance with local EHS regulations, laws and Siemens Energy requirements based on, scope of work, work activities and number of employees or third-party workers.

Each Zebra site identifies a site management team that are responsible for the management and operation of the location on a day-to-day basis (i.e., Emergency response, crisis management, EHS issues, maintenance, security, working environment, contractor management, workspaces etc.).

The site management team will consist of business representatives residing at the location, SE Real Estate, and representatives from EHS acting as advisors. The site management team is led by a designated senior manager who assumes overall accountability and responsibility for the location, as applicable.

3.21. Records

All records and data that are identified as a requirement of the ISO 14001 and 45001 management system standards, by local regulation or by Siemens Energy standards and instructions, are to be maintained and managed directly by Business Area, Corporate and Global Function. All records to be kept available for review, where requested.

4 Abbreviations, Definitions

Abbreviation	Definition
Business Area	GS, GT, TI, and WP, Including Sites, Execution Units, Regional Units, and Independently Managed Businesses.
EHS	Environment, Health, and Safety
EHS Aspect	EHS aspects are elements of an organization's activities, processes, plants, products, systems, or services as well as external conditions that can have a relevant impact on employee health, safety and/or on the environment or Siemens' assets.
EQS	Environmental Protection, Health Management, Safety, Quality and Security
Corporate Functions	Organizational support to Business Management
EVP	Executive Vice President
Health	Health is a state of physical, psychological, and social wellbeing and not just the absence of disease or infirmity.
Global Functions	Organizational support to Business Areas, Hub, and Affiliated Companies.
Industrial Environmental Protection	Industrial environmental protection covers systematic management of environmental aspects in the following areas: • production sites, offices, and projects • procurement • business travel for company employees, including commuting to the workplace • shipment of goods / services as applicable
ISO	International Organization for Standardization
ISO 14001	Environmental Management Systems - (ISO Standard)
ISO 45001	Occupational Health and Safety Management Systems - (ISO Standard)
