Scope / Target Group

This document aims to ensure that the equipment of Siemens Energy and of the subcontractor companies providing services to Siemens Energy – as specified in section 4.1 – is visually inspected at defined intervals within the premises and areas of operation of Siemens Energy A.Ş.

Management Summary

The visual inspections of the equipment located at the Siemens Energy Ankara Equipment Center and the Siemens Energy Kartal Warehouse are not subject to this coding. Inspections at these locations are carried out and recorded by the relevant authorized technical personnel after each removal from and return to the warehouses.

1. Scope and Purpose

This document aims to ensure that the equipment of Siemens Energy and of the subcontractor companies providing services to Siemens Energy – as specified in section 4.1 – is visually inspected at defined intervals within the premises and areas of operation of Siemens Energy A.Ş.

2. Field of Application

This document covers the equipment – specified in section 4.1 – of Siemens Energy and of the subcontractor companies providing services to Siemens Energy, within the premises and areas of operation of Siemens Energy A.Ş.

The visual inspections of the equipment located at the Siemens Energy Ankara Equipment Center and the Siemens Energy Kartal Warehouse are not subject to this coding. Inspections at these locations are carried out and recorded by the relevant authorized technical personnel after each removal from and return to the warehouses.

3. Responsibility

The inspection responsibility defined in this document lies with the Siemens Energy site management, while the equipment control responsibility lies with the subcontractor site management. Equipment inspections are carried out by “Authorized Technical Personnel” who are appointed by the subcontractor and approved by the Siemens Energy site management.

For electrical equipment, persons holding an ‘electrical diploma, graduation certificate, certificate, journeyman/master certificate or vocational qualification certificate’ must be selected. For mechanical and lifting equipment, persons holding a ‘diploma, graduation certificate, certificate, journeyman/master certificate or vocational qualification certificate appropriate to the equipment to be inspected’ must be selected.

4. Implementation

4.1. Periodic Inspection

All inspections at the locations are performed and maintained periodically according to the color codes specified in the table below, taking the Risk Assessment Report into account. The color codes determined annually by Siemens Energy are communicated to the subcontractors.

COLOR CODING TABLE		
MONTHS	MONTHLY INSPECTION	QUARTERLY INSPECTION (3-MONTH)
	ELECTRICAL-MECHANICAL EQUIPMENT PRESSURE EQUIPMENT	LIFTING & CONVEYING EQUIPMENT ACCESSORIES FIRE EXTINGUISHERS
JANUARY	GREEN	YELLOW
FEBRUARY	BLUE	
MARCH	YELLOW	
APRIL	WHITE	BLUE
MAY	GREEN	
JUNE	BLUE	
JULY	YELLOW	WHITE
AUGUST	WHITE	
SEPTEMBER	GREEN	
OCTOBER	BLUE	GREEN
NOVEMBER	YELLOW	
DECEMBER	WHITE	
NONCONFORMING EQUIPMENT	RED	

4.2. Visual Inspection and Recording

- The visual inspections of all equipment to be used within the scope of the project are carried out by the authorized technical personnel.
- A “Visual Inspection Form” prepared for each item of equipment is completed. It is signed by the authorized technical personnel and by the responsible person of the team performing the work.
- Colored tapes (Yellow, Blue, White, Green, Red) are attached to the visually inspected equipment at the appropriate intervals according to the annual color scale. Tapes that fall off or break are reported to the “authorized technical personnel” so that they are renewed.
- The validity period of the equipment’s visual inspection is, from the inspection date, as long as the periods specified in 4.1. Equipment whose inspection period has expired shall not be used on site.
- After their visual inspections, all equipment is recorded in the “Equipment Tracking Table” according to equipment type. This table is submitted monthly, signed by the Authorized Technical Personnel and the Site Manager, to the Occupational Safety Specialist. The Occupational Safety Specialist checks, signs and archives it.
- During site activities, the procedure shall be re-applied from the beginning for all equipment specified in 4.1 that is reported as nonconforming by the Siemens Energy Occupational Safety Specialist.
- After visual inspections, a “Red Colored Tape” is attached to nonconforming equipment. Penal actions shall be applied against personnel who use equipment carrying a red tape on site – in accordance with the Siemens Energy disciplinary penalty regulation – and against subcontractor companies in accordance with the Subcontractor Contractor EHS Specification.
- An equipment visual inspection file is created for each machine and item of equipment and is archived throughout the project.
